Mobile Waste Systems

**for Jobsite and
Disaster Relief**

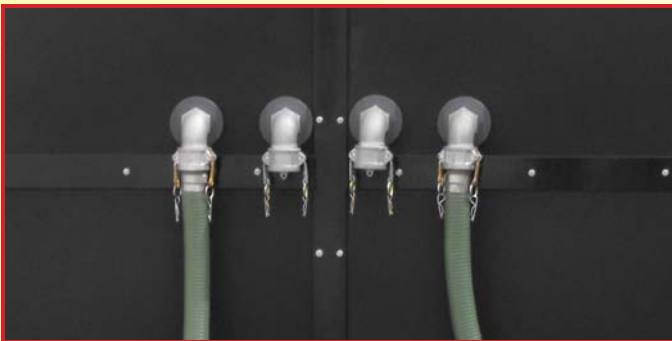

Advanced Class I Wastewater Mobile Treatment Systems

Up to 4 lift stations per unit handling 500 to 1000 gallons per day.

Designed for Ease of Maintenance

Quick Connect for Ease of Hook-ups

Everything You Need

The system shown below is one of the most complete Class I treatment systems available today. It includes the AP series Treatment Plant with the Platform Mounted OPS system, Offset Service Access Port and anchored Fine Air Diffusers. Also available are the optional Pretreatment tank for intercepting grease, large solids and trash, the Chlorinator Pump tank, Effluent Pump & Screen and the Water Pump Float Switch. The innovative design of every system ensures years of trouble-free service at an operating cost for electricity that is close to that of running a small household appliance. The trailers are custom made and designed for rugged jobsites.

Harnessing the Power of Natural Processes

- Our Aerobic processing plants can handle 500-1000 gallons per day.
- 500 gallons per day can handle approximately 5 persons who never leave the site.
- Have more than 10 people? No Problem! We can set up multiple units on site.
- Just make sure you have a 115 volt plug available.

Our professional commitment to market needs and customer service have enabled us to reach our goal of providing effective products that assure a safe, reusable effluent.

We are helping Mother Nature protect our environment and our most valuable natural resource—water. Our continuing mission is to develop and manufacture individual on-site wastewater treatment facilities that meet society's needs in the field.

Mullin Pumping's Mobile Treatment Units are among the most advanced on site products available today. The improvements in these units make them not only extremely efficient operational units but also one of the most easily maintainable systems in the industry.

Mobile

Innovation is always the watchword at Mullin Pumping, Inc. The proprietary mobile system provides unsurpassed simplicity in installation, reliability, and ease of service. The selected system is assembled at our facility into a single, sturdy package that is ready for quick setup on the jobsite.

System options allow us to design a system that best suits your job application.
